COMMERCIAL RESIDENTIAL INDUSTRIAL

SCAFFOLDING HERITAGE WORKS

Bolt Scaffolding provides specialist scaffold access to heritage renovation sites across South East Queensland. Our highly trained teams of scaffolders are expert technicians in the use of tube & coupler scaffolding and hold High Risk Work scaffold licences. Bolt Scaffolding erects AS/NZS compliant scaffolding, and our technicians hold Authorised Persons status with Ergon and Energex to allow for safe works within the electrical exclusion zones on site.

Using the adaptable “tube & coupler” scaffolding, Bolt Scaffolding endeavour to minimize the use of mechanical fixings where practicable, within AS/NZS Standards, limiting damage to the heritage building. Tube & coupler scaffolding is fully adaptable to heritage site conditions and is ideal for specific heritage requirements, where system scaffolding cannot be erected. A combination of scaffolding and roof edge protection can be erected as per heritage site requirements.

Bolt Scaffolding are experienced in heritage building insurance repair work, and can provide full suites of documentation as required, from design to handover certification and completion pictures.

Capabilities

Our experience with “tube & coupler” scaffold enables us the versatility to provide clients with scaffolding that truly meets their site safe access needs, whilst also meeting the code requirements for heritage sites. We provide fully designed, AS/NZS code compliant scaffold access including, but not limited to:

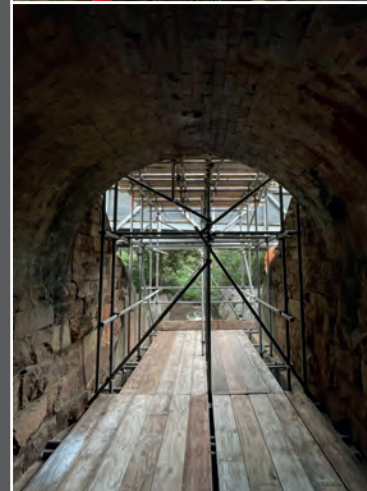

- Independent scaffolds
- Roof saddle scaffolds for chimney access
- Pedestrian bridges & walkways
- Lifting frames & support scaffolds
- Temporary roofs & buildings
- Cantilever & truss-out scaffolds
- Hung & suspended scaffolds
- Loading bays
- Encapsulation as required

Heritage Projects:
